EXPERIENCE

DATA PLATFORM ARCHITECT *Lakeland, FL*
Collectiv *11/2023 - present*

- Architected and delivered a secure, medallion Azure data and ML platform within a GCC High environment, enabling the client's first end-to-end machine learning solution. Drove network design and compliance alignment across custom DNS, client-managed VNets, and private endpoints. Implemented enterprise-grade CI/CD with Azure DevOps for ADF and Databricks, and operationalized ML lifecycle management using MLflow.
- Implemented Fabric solutions spanning semi-structured data parsing with added business logic and end-to-end medallion architecture across dev/test/prod workspaces for improved governance.
- Pioneered the Data Platform/Engineering role within the company, contributing to project scoping and the establishment of best practices. Worked on generalized metadata driven implementations of ETL/ELT in Fabric.

SENIOR CONSULTANT - DATA ENGINEER *Herndon, VA*
3Cloud (formally BlueGranite, acquired in August 2022) *04/2022 - 11/2023*

- Developed fully parameterized pipelines, spark notebooks, and DataFlows leveraging metadata to deliver solutions. Utilized medallion architecture to suit customer-specific needs across multiple industries.
- Developed and empowered strong communication practices between the team and client, enabling continuous feedback and active team support.
- Led HR migration and integration for an S&P600 company, collaborating with a team of 4 to integrate ERP HR data (3000+ employees) via REST and SOAP APIs, ensuring backward compatibility for payroll while implementing a file-based ELT pipeline with Blob Storage triggers and Synapse Pipelines.
- Conducted data enrichment for a bus company, integrating tracking data from CosmosDB and route speed info from Tremble's API via PySpark, enhancing driver assessment efficiency while maintaining existing warehousing tables.

DATA ENGINEER *Chicago, IL*
Milliman *04/2021 - 12/2021*

- Handled insurance claim data from MySQL server and flat files using SFTP on AWS virtual machine. The data was processed daily for several clients.
- Initiated and led the implementation of Airflow into the team's stack. Deployed Airflow on a single machine that ran the DAGs for 2 clients. Executed tasks with specialized libraries on a docker container with a custom python image. Ensuring smooth orchestration of processes and notifications of errors.
- Trained team members in the use of Airflow and wrote detailed documentation on Github and Confluence.

SKILLS

Cloud: Azure Fabric, ADF, Blob Storage, Azure Synapse Analytics, EventGrid, Azure DevOps, Databricks, Spark, AWS Storage, CI-CD **| Languages**: Bash, Python (numpy, pandas, psycopg2, matplotlib, scikit-learn), C++, R, and SQL (Azure SQL, MySQL, PostgreSQL), PySpark **| Technologies**: Git, Docker, Airflow, MLFlow

CERTIFICATIONS AND EDUCATION

Certifications: Databricks Data Engineer Professional | Databricks Data Engineer Associate
Northwestern University – ***M.S. in Physics***, 2017 | ***Ph.D. Candidate in Physics*** – all but thesis, 2015-2020
University of Puerto Rico – ***B.S. in Physics***, 2015
